

OLIVER 1908

Automated Packaging System

The 1908 machine is a conveyerised, pneumatic, automated sealing machine.

Suitable for kitchens producing up to 500 meals per day.

Please note: The 1908 machine requires the use of compressed air to operate. An air compressor is not included with the purchase of the sealing machine.

Required air compressor specification;
240 volt AC (AUS)
10 Amps, 50hZ (AUS), 85psi

- Efficient intermittent motion, seals between 5-27 trays per minute.
- Uses continuous film rolls, unprinted or random print repeats.
- Automatic discharge of sealed trays with adjustable discharge shelf utilising a Lexan® safety guard.
- Adjustable sealing dwell time and sealing platen force.
- Lockable castors allow for easy movement.
- Easy to clean and hygienic, constructed from stainless steel and anodised aluminium.
- Simple to operate.
